

Lab 2 Part1: Symmetric Encryption

Overview:

In this lab you'll be introduced to Symmetric Encryption through Caesar Cipher.

Objective:

1. Applying symmetric encryption to encrypt your name.
2. Applying symmetric encryption to decrypt messages.

The sections highlighted in:

- **green** do not require IFS Lab or VM Workstation Pro & Windows 10
- **yellow** require VM Workstation Pro & Windows 10
- **red** require the IFS Lab
- **Blue** the screenshots you need to include in your lab report

The Lab Activities

Part 1: Encrypt your full name with a shift of 12, and complete the following table:

Submit this table in your lab report

Encryption algorithm	Caesar Shift
Encryption key	12
Plaintext	Greemesh Basnet
Ciphertext	Sdqyqet Nmezqf

Part 2: Play Desert Oasis game at <https://www.cryptoclub.org/#vDesertOasis>

After you finished each part of the game, take a screenshot to prove that you finished that stage.

Note: While taking screenshots, make sure time/date and customized wallpaper is visible.

Lab Report Write-up

Submit your lab results using the template provided for lab 0.

Deliverable

Submit your lab report to Blackboard (Learn@Seneca) under the appropriate week.

Your report must contain the following:

- 1- Your name & student number
- 2- Screenshots as requested above
- 3- Each screen shot must show:
 - a. System date & time
 - b. Your customized background
 - c. Caption describing what the screenshot is about

Notes:

- Labs submitted one week late, will lose 50% of the grade automatically, and if later than that, it will be assigned a grade of 'F'.
- **Late labs still need to be satisfactorily completed and submitted by Study Week** to meet SEC220's Promotion Requirements.
